Lesson 24. Briquetting Systems

Question Bank - Answers

1. Based on application of pressure, briquetting production of the agro residues are divided into three categories; they are high pressure or high compaction technology, medium pressure technology and low pressure technology .

2. Two major types of binder less or high compaction briquetting technologies are piston press (ram and die) technology and screw press technology.

3. Most of the briquetting machines installed in India are piston press type.

4. The power consumption in piston press technology is lesser than screw press briquetting technology.
