Lesson 25. Performance evaluation of briquetting machines

Question Bank - Answers

1. The performance of the drying system will be assessed in terms of efficiency of the system , capacity and quality of the final product .

2. Lesser the size of the feed material, better will be the briquetting of crop residues. (True / False)

(Ans : True)

3. The raw materials are reduced to uniform size of about 1 - 10 mm before briquetting.

4. The briquetting system efficiency is the ratio between the input power supplied to the system to the energy spent for the production of briquettes in a specified time.

5. The quality of the briquetting product relay on the moisture content of the feed crop residues. (True / False)

(Ans : True)
